List of Lining Out Stock Grafts, Rooted Cuttings for Spring, 1943

Gentlemen:

I am herewith sending you my new list of lining out stock for Spring 1943.

There is a good assortment of both new and one and two year old cuttings and grafts; all well grown first class stock. I like to draw your attention to the items of one year grafts and cuttings from pots which makes ideal stock to set out with little chance of losses as it has been out in beds since last Summer. There are also many varieties of Taxus all hardy and in many sizes and many other items and plants of interest.

Do not forget to read the description of the two new varieties of Yew introduced by me a few years ago and try some. I am sure you will like them wherever you are.

Though we have our troubles with labor shortage, one should not forget to line out some stock as it takes time for stock to grow and you would not want to be running out when times get better again.

Hoping you will give me a trial order if you are not already a customer, I remain;

Yours truly,

JOHN VERMEULEN.

	"	24-30"	125.00
	"	30-36"	175.00
	"	36-42"	250.00

Syl Rothundifolia: This variety makes a fine lawn tree with abundant small round shiny leaves, a good one for your collection.

1 yr. 4"	grafts	12-15"	25.00
	pot	12-15"	40.00

Syl. Tricolor: nothing has to be said for this very colorful variety, it also is a good grower

1 yr. 4"	grafts	12-15"	25.00
	pot	12-15"	40.00
	B&B	15-18"	50.00

FRANKLINIA: (Gordonia) This is one of the best flowering trees in the garden. Its pure white flowers with its yellow stamen stand out clearly against the shiny green foliage which turns a beautiful Autumn red. The flowers are very fragrant and appear from early August until frost. It transplants well bare root, but must be well soaked after it is planted. It is hardy where winter weather is not too dry.

rt ct.	6-8"	10.00
	6-8"X	15.00
	8-10"X	17.50
	10-12"X	20.00

THE TAXUS OR YEW

There is no doubt that at the present time there is no better evergreen in this country than the different var. of Yews. They can be planted almost anywhere and can stand all kinds of weather including dry and they also grow well in the shade. They can be used for all types of planting and make the finest hedges. I am offering several varieties, all hardy; also two new varieties brought in the trade by me several years ago and which are well tried out by now all over the States and are highly recommended.

I like to bring to your attention to one year cuttings from 2 1/4" pots which have been planted in beds last summer and been outside all winter, they have a nice little ball and plenty roots and make fine stock to bed or line out, also for late planting.

TAXUS CUSPIDATA VERMEULEN

"upright Brevifolia". A Japanese Yew of the Brevifolia type in needle and color but in a straight upright form. It can be grown into a fine specimen for single planting but above all it is "THE YEW FOR A HEDGE" when grown in the bushy form. It is very hardy and sturdy and well liked by the trade.
